## **DETAILED ACTION**

### **EXAMINER'S AMENDMENT**

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Aasheesh Shravah on July 23, 2010 and July 26, 2010.

The application has been amended as follows:

Claim 1 in procedure (c), "step (b)" has been changed to – procedure (b) -- and "the upright" has been changed to – an upright --.

Claim 8 in procedure (c), "step (b)" has been changed to – procedure (b) -- and "maintained in the upright position" has been changed to ---in an upright position---.

Claim 9 on line 1, after "claim 8," – in procedure (c) -- has been inserted.

Claim 10 on lines 2 and 3, "step (a), the rail is maintained in the upright" has been changed to – procedure (b), maintaining the rail in the upright --.

Claim 11 on line 3, "step (a)" has been changed to – procedure (a) --.

Claim 15 on lines 1 and 2, "procedure (a), the rail is maintained in the upright" has been changed to – procedure (b), maintaining the rail in the upright --.

Art Unit: 1793

2. The following is an examiner's statement of reasons for allowance: A rail manufacturing method as set forth in claims 1, 8 to 12 and 15 to 17 of the present application is not taught or fairly suggested by the art of record.

3. The previously applied reference, English translation of Japanese patent 59031824 ("JP-824") discloses a rail manufacturing method in figure 5, which is referred to as comparative example C, comprising the procedure of hot rolling billet into the form of a rail having high temperature of about 700°C followed by cooling in the upright position on a cooling bed with no insulation in the temperature range of 400 to 250°C. In comparison, Applicant's independent claim 1 recites maintaining rail in an upright position and mechanically restraining a foot of the rail and cooling is started at a higher temperature than JP-824 when the surface temperature of the head of the rail is in a temperature range of approximately 800°C to approximately 400°C followed by naturally cooling the air when a surface temperature of a head of the rail in a temperature range of approximately 400°C to approximately 250°C. Also Applicant's independent claim 8 recites procedure c) comprising accelerated cooling limitations not taught or suggested by JP'824.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
